Professional Objective

To secure an internship in Requirements Engineering, contributing my skills in requirements elicitation and analysis, process organization, and stakeholder communication, with the goal of learning and collaborating on the development of effective solutions aligned with user needs.

Education

Software Engineering - Pontificia Universidade Católica de Minas Gerais – PUC Minas
February 2024 – February 2028 (In progress)

Languages

Languages * English: Advanced/Fluent (Certificate of Completion - Kumon)

Professional Experience

Vetta

August 2025 – Present

Software Development Intern, Energy

I work as a software development intern focusing on the creation of dashboards for data analysis, developing interfaces with well-structured charts and tables according to client demands. I am responsible for tracking and monitoring the application's performance, ensuring that data processing and visualization occur correctly. I also configure the system according to each client's needs, contributing to functional adjustments, usability improvements, and the accurate presentation of information.

Publications

Article published at SBGames 2025:

"Development of a Customizable Serious Game for Scientific Dissemination: An Approach Based on Action Research"

Authors: Daniel D. Ckagnazaroff, Juan V. Silvério, Júlia Nascimento, Pedro H. Maia, Sofia Silva, **Maria Clara Gomes Silva de Oliveira**, Joana G. Ribeiro, Lucila Ishitani.

Abstract: The article presents the creation of customizable minigames for scientific dissemination,

using the Action Research methodology. Two games and their editors were developed, identifying four desirable characteristics in serious games aimed at science.

Projects

Website for a Psychologist

August 2025 – December 2025

Desenvolvedora Full-stack

Full-Stack Developer I worked in a hybrid role as a Full-Stack Developer and product manager for a psychologist, being responsible for the direct interface with the client. I participated in weekly meetings for requirements elicitation, data collection, and expectation alignment, translating business needs into technical features. This constant feedback routine ensured the application's development was always aligned with the client's vision, guaranteeing value delivery and the solution's technical viability.

Courses and Events

- HackaTruck MakerSpace – Swift (Apple & IBM)
- Red Hat Linux Course – Operating System Fundamentals
